

Portrait of Lilian VELEA, Senior Researcher at Meteo Romania

Hi Liliana, could you tell us more about your background?

I am a **senior researcher in the Climate Department** at the National Meteorological Administration in Romania (MeteoRo) and **my recent activity focused on studies relating climate changes and societal impacts**, as well as on early-stage development of climate services and products.

What is your role in URCLIM?

My contribution to URCLIM project lays down on the **analysis of thermal discomfort, risk assessment related to heat-wave events, urban climate change scenarios as basis for climate services**.

Great ! And what do you think about the project's outcomes?

I think URCLIM has a **huge potential to develop and deliver enhanced information needed to build up specific and efficient adaptation measures in urban areas**. Given the impressive enthusiasm and passion for science of all colleagues involved in this project, I am confident that URCLIM will reach its objectives, making a significant contribution in this area.
